## EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Annual Report.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review, and Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 1 April 1922.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31 March 1922.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 1 April 1922. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

## NOTES ON THE FIRST QUARTER OF 1922.

## ENGLAND AND WALES.

*Births.*

The Births registered in the *first* Quarter of 1922 numbered 207,573 and were 8,351 more than in the preceding Quarter, but 2,094 fewer than in the corresponding Quarter of 1921. The Illegitimate Births totalled 9,253 or 252 fewer than in the first Quarter of 1921.

Of these 207,573 Births 106,373 were males and 101,200 females, giving a proportion of 1,051 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,044.

The Births registered in the Quarter correspond to an annual rate of 22·2 per 1,000 enumerated population.

*Deaths.*

The Deaths registered numbered 165,467 and were 43,625 more than in the preceding Quarter, and 36,204 more than in the corresponding Quarter of 1921. They included 82,560 males and 82,907 females, corresponding to an annual rate of 17·7 per 1,000 enumerated population and a proportion of 996 males to 1,000 females. In only one other quarter during the last fifteen years, viz., the fourth quarter of 1918, did the deaths of females exceed those of males.

Influenza was stated to be either a primary or contributory cause of deaths in 16,888 cases, or 10·2 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 96 per 1,000, this being 20 per 1,000 below the average of the 10 preceding first Quarters.

*Urban Mortality.*

The highest death rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·08 per 1,000 living in St. Helens, in Plymouth, and in Wolverhampton, and 0·10 in Grimsby; from *measles* 0·62 in Birkenhead, 0·93 in Bootle, 0·94 in West Ham, and 1·06 in Wigan; from *scarlet fever* 0·17 in Rhondda and in Willesden, 0·21 in Stoke on Trent, 0·29 in Aberdare, and 0·31 in Bootle; from *whooping cough* 0·88 in Smethwick, 1·17 in Stockton on Tees, 1·29 in Bootle, and 1·63 in West Ham; from *diphtheria* 0·71 in Ealing, 0·74 in Willesden, 0·75 in Tottenham, and 0·85 in West Bromwich; and from *influenza* 3·92 in Carlisle, 4·50 in Aberdare, 5·20 in Sunderland, and 5·38 in Gateshead. One death from smallpox occurred in Saddleworth Urban District.

The highest death rates per 1,000 Births from *diarrhoea* and *enteritis* among children under two years of age were 16·7 in Carlisle and in Bournemouth, 17·6 in Stoke on Trent, and 20·0 in Stockton on Tees.

## NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 42,106, as against 133,445 and 80,404 in the first Quarters of 1920 and 1921 and a natural decrease of 47,128 in the first Quarter of 1919.

## NOTES ON MARRIAGES.—Fourth Quarter, 1921.

The number of *persons* married in the *fourth* Quarter of 1921 in England and Wales was 167,982, a decrease of 11,052 from the number in the preceding Quarter, and was 15,808 less than in the corresponding Quarter of 1920. This number corresponds to an annual rate of 17·6 per 1,000 enumerated population.

## UNITED KINGDOM.—Fourth Quarter, 1921.

In Great Britain and Ireland 250,054 Births and 152,241 Deaths were registered in the three months ended 31 December 1921. The natural increase of population was therefore 97,813. The number of persons married was 196,948.

For facts, in detail, concerning Scotland, Northern and Southern Ireland, reference should be made to the Returns published by their respective Registrars General.

**METEOROLOGY.\*****JANUARY.**

The weather of January was very changeable, the fluctuations of temperature being exceptionally large. Precipitation was above the normal, the excess being greatest in the parts of the country where the drought of the preceding months had been felt most severely. Gales and high winds were of frequent occurrence.

Between the 13th and 25th the weather was generally cold and snow was experienced in all districts, especially on the 15th and 16th. On the 25th a depression which had appeared off the south-west of the British Isles brought warmer air to the western districts which gradually spread to all parts. Under the influence of this depression the last few days of the month were mild and unsettled.

**FEBRUARY.**

Except for about a week during the earlier part of the month, when anticyclonic conditions prevailed, the weather of February was influenced by Atlantic depressions. Mild and unsettled conditions consequently predominated, although there were considerable fair periods at intervals.

From the 4th to the 9th a spell of dry and cold weather was experienced; frost continued all day over eastern England on the 5th, and during the succeeding night the temperature of the air was as low as  $19^{\circ}$  F. in parts of Oxfordshire,  $16^{\circ}$  F. in Hampshire and  $15^{\circ}$  F. in Lincolnshire.

From the 23rd to the 25th temperatures were remarkably high, exceeding  $55^{\circ}$  F. over a wide area. On the coast of North Wales  $62^{\circ}$  F. was recorded on the 25th. A maximum temperature of  $61^{\circ}$  F. at Nottingham on the same date has only once been exceeded in February during the last 50 years.

**MARCH.**

During the first week of March a south-westerly type of pressure distribution prevailed, the weather being mild and unsettled. Strong winds and gales were frequent and culminated in an unusually severe gale over southern England on the morning of the 8th. Subsequently pressure was high to the north and west of the British Isles; easterly or northerly winds predominated and there was little or no precipitation.

The coldest weather was experienced towards the end of the month when there were frequent showers of sleet, snow or hail.

On the morning of the 8th wind velocities in southern England, and especially in the western Channel, were abnormally high, and gusts of over a 100 miles per hour were recorded.

BELFAST†	425,000																			

\* Excluding non-civilians.

† The populations are total populations and relate to 1922. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland; those in Dublin Registration Area are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas. The figures relating to Belfast were not available at the time of going to press.

‡ As extended in November 1921.

\* For statistics of other Colonial and Foreign Cities during the Fourth Quarter of 1921, see Quarterly Return for that period (No. 292).

† The death-rates in this column relate to all ages for Madras and Christiania, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 8 deaths from Plague in Alexandria.

§ Including deaths from croup in Bombay, Paris, Antwerp, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, and Montevideo.

|| The estimated population and deaths refer to the civilian population only.

¶ Including deaths from Plague, 20 in Calcutta and 222 in Bombay, and 368 deaths from Asiatic Cholera in Calcutta, 1 in Bombay, and 7 in Madras.

\*\* The registration of births in Bombay is incomplete.

†† The inclusion in this table of Cities in parts of the British Empire other than India takes effect from the beginning of 1922 only, and the figures will accordingly appear in subsequent issues as they become available.

Table VIII.

PART I.—CITY OF LONDON AND METROPOLITAN  
BOROUGH.PART II.—BOROUGH AND OTHER URBAN DIS-  
TRICTS AND RURAL DISTRICTS with  
populations over 10,000.

PART III.—PORT SANITARY DISTRICTS.

PART IV.—ENGLAND AND WALES.

Cases of certain Infectious  
Diseases notified in the  
13 weeks ended 1 April  
1922.

PART I.	Scarlet Fever.	Diphtheria.	Enteric Fever.	Pneumonia.	Puerperal Fever.	Ophthalmia Neonatorum.	PART II.— continued.	Scarlet Fever.	Diphtheria.	Enteric Fever.	Pneumonia.	Puerperal Fever.	Ophthalmia Neonatorum.

## EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Annual Report.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review, and Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 1 July 1922.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30 June 1922.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 1 July 1922. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

*Note :—*The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates.

## NOTES ON THE SECOND QUARTER OF 1922. ENGLAND AND WALES.

### *Births.*

The Births registered in the *second* Quarter of 1922 numbered 200,550 and were 7,023 fewer than in the preceding Quarter, and 24,766 fewer than in the corresponding Quarter of 1921. The Illegitimate Births totalled 8,732 or 1,248 fewer than in the second Quarter of 1921.

Of these 200,550 Births 102,509 were males and 98,041 females, giving a proportion of 1,046 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,045.

The Births registered in the Quarter correspond to an annual rate of 21·2 per 1,000 enumerated population. This is the lowest birth-rate recorded in any second quarter except during the period of the war.

### *Deaths.*

The Deaths registered numbered 120,315 and were 45,152 fewer than in the preceding Quarter, but 11,844 more than in the corresponding Quarter of 1921. They included 61,479 males and 58,836 females, corresponding to an annual rate of 12·7 per 1,000 enumerated population and a proportion of 1,045 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 1,852 cases, or 1·5 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 83 per 1,000, this being 2 per 1,000 below the average of the 10 preceding second Quarters.

### *Urban Mortality.*

The highest death rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *measles* 0·96 in Salford, 1·45 in Wigan, 1·64 in St. Helens and 2·09 in Rotherham; from *scarlet fever* 0·18 in Bradford, 0·30 in Ealing and 0·36 in Aberdare; from *whooping cough* 0·69 in West Bromwich and in Barrow-in-Furness, 0·70 in Stoke-on-Trent, 0·74 in Stockton-on-Tees and 0·78 in Great Yarmouth; from *diphtheria* 0·30 in Newport (Mon.), 0·31 in Willesden, 0·33 in Worcester, 0·36 in Edmonton and 0·41 in Ealing; and from *influenza* 0·50 in Southport and Aberdare, 0·54 in Gloucester and Bradford, 0·56 in Rochdale and 0·93 in Barnsley.

The highest death rates per 1,000 Births from *diarrhoea and enteritis* among children under two years of age were 15·2 in South Shields, 15·3 in Manchester and Stockton-on-Tees, 15·9 in Rhondda, 16·9 in Rochdale and 17·5 in Acton.

### NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 80,235, as against 40,322, 129,345 and 116,845 in the second Quarters of 1919, 1920 and 1921.

**NOTES ON MARRIAGES.—First Quarter, 1922.**

The number of *persons* married in the *first* Quarter of 1922 in England and Wales was 101,148, a decrease of 66,834 from the number in the preceding Quarter, and was 50,826 less than in the corresponding Quarter of 1921. This number corresponds to an annual rate of 10·8 per 1,000 enumerated population.

**UNITED KINGDOM.—First Quarter, 1922.**

The information usually given under this heading is not available.

**METEOROLOGY.\*****APRIL.**

Throughout the greater part of April temperature was comparatively low. The 3rd was particularly cold in some districts; on that day the temperature did not exceed 33° F. at Malvern and 35° F. at Hampstead. The only really warm day was the 14th when the thermometer rose to about 60° F. in many districts and reached 67° F. at Kew Observatory. Rainfall, on the whole, was above normal; the excess in some parts of Central and Southern England was comparatively big. At Grayshott, Hants, for example, the total fall for the month exceeded the normal by as much as 64 mm.

**MAY.**

During the first week of May cold unsettled weather prevailed, but later conditions improved and by the 20th a hot spell had commenced in the south-eastern and eastern districts of England. In many cases the temperatures were the highest on record for the month. At the Royal Observatory, Greenwich, (Glaisher Stand) 91° F. was recorded, and there was a reading of 90° F. at Bexley Heath (Stevenson Screen). At Kew Observatory, Richmond (North Wall Screen), the thermometer reached 86° F. on three successive days (22nd, 23rd, 24th), this being the highest temperature recorded for this month during the past 50 years. The mean temperature for the month was above normal for all districts. The rainfall for the month was below the average in all districts. Sunshine was well above the average, particularly over Eastern and South-eastern England.

**JUNE.**

The warm sunny weather which had characterized the end of May persisted until about the middle of the month, when cool and unsettled weather set in associated with a series of depressions approaching the British Isles from the Atlantic. The hottest day in many districts was the 1st when maxima of over 80° F. were recorded at several stations. The last week of the month was everywhere cold and changeable. The month's rainfall was generally below the average. The mean daily duration of sunshine did not vary from the normal to any large extent.

---

\* Excluding non-civilians.

† The populations are total populations and relate to 1922. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas. The figures relating to Belfast were not available at the time of going to press.

\* For statistics of other Colonial and Foreign Cities during the First Quarter of 1922, see Quarterly Return for that period.

† The death-rates in this column relate to all ages for Bombay, Madras, Christiania, and Budapest, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 1 death from Plague in Sydney and suburbs, 1 in Brisbane, and 4 in Alexandria.

§ Including deaths from croup in Bombay, Paris, Antwerp, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Budapest, Rio de Janeiro, and Montevideo.

|| The estimated population and deaths refer to the civilian population only.

¶ Including deaths from Plague, 110 in Calcutta and 239 in Bombay, and 743 deaths from Asiatic Cholera in Calcutta, 5 in Bombay, and 2 in Madras.

\*\* The registration of births in Bombay is incomplete.

†† The inclusion in this table of Cities in parts of the British Empire other than India takes effect from the beginning of 1922 only, and the figures will accordingly appear in subsequent issues as they become available.

Table VIII.

PART I.—CITY OF LONDON AND METROPOLITAN  
BOROUGH.PART II.—BOROUGH AND OTHER URBAN DIS-  
TRICTS AND RURAL DISTRICTS with  
populations over 10,000.

PART III.—PORT SANITARY DISTRICTS.

PART IV.—ENGLAND AND WALES.

Cases of certain Infectious  
Diseases notified in the  
13 weeks ended 1 July  
1922.

## EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Annual Report.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

---

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review, and Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 30 September 1922.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30 September 1922.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 30 September 1922. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

*Note* :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates.

## NOTES ON THE THIRD QUARTER OF 1922.

### ENGLAND AND WALES.

#### *Births.*

The Births registered in the *third* Quarter of 1922 numbered 195,696 and were 4,854 fewer than in the preceding Quarter, and 19,144 fewer than in the corresponding Quarter of 1921. The Illegitimate Births totalled 8,462 or 1,434 fewer than in the third Quarter of 1921.

Of these 195,696 Births 100,369 were males and 95,327 females, giving a proportion of 1,053 males to 1,000 females; the average proportion in the 10 preceding third Quarters was 1,045.

The Births registered in the Quarter correspond to an annual rate of 20·5 per 1,000 enumerated population. This is the lowest birth-rate recorded in any quarter except during the period of the war.

#### *Deaths.*

The Deaths registered numbered 90,982 and were 29,333 fewer than in the preceding Quarter, and 8,152 fewer than in the corresponding Quarter of 1921. They included 47,389 males and 43,593 females, corresponding to an annual rate of 9·5 per 1,000 enumerated population and a proportion of 1,087 males to 1,000 females. The death-rate is the lowest recorded in any quarter.

Influenza was stated to be either a primary or contributory cause of deaths in 545 cases, or 0·6 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 55 per 1,000, this being 31 per 1,000 below the average of the 10 preceding third Quarters. It is the lowest infant mortality recorded for any quarter.

#### *Urban Mortality.*

The highest death rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·07 in Norwich and 0·14 in Dudley; from *measles* 0·87 in Manchester, 0·99 in Salford, 1·16 in West Hartlepool, and 1·79 in Oldham; from *scarlet fever* 0·09 in Walthamstow, Rochdale, and York, 0·14 in Hendon, and 0·17 in Reading; from *whooping cough* 0·26 in Chesterfield and Warrington, 0·43 in Stockton-on-Tees, and 0·68 in Canterbury; from *diphtheria* 0·24 in Ealing and Portsmouth, 0·25 in Walthamstow, 0·50 in Gillingham, and 0·59 in West Bromwich; and from *influenza* 0·17 in Newport (Mon.), 0·19 in St. Helens, 0·22 in Doncaster, and 0·26 in Rochdale.

The highest death rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 15·1 in Dudley, 16·9 in Gateshead, 17·5 in Hull, 17·8 in Rotherham, and 21·2 in Doncaster. Special tables relating to summer mortality from diarrhoea and enteritis are inserted in the present Return (Tables IX. and X.).

*Small Pox.*

Four fatal cases of small pox were registered during the quarter; one belonged to the Metropolitan Borough of St. Pancras, one to the Metropolitan Borough of Bethnal Green, one to the County Borough of West Ham, and one to Middleton Urban District (Lancs.). The number of cases of the disease notified during the quarter was 213, of which 113 occurred in the County Borough of Middlesbrough, 18 in Belper rural district, 17 in Ilkeston urban district, 15 in Barnsley rural district, 7 in London, and 6 each in Eastwood and in Bentley with Arksey urban districts. The distribution of the other 31 cases is shown in footnotes to Table VIII.

## NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 104,714, as against 86,220, 136,113 and 115,706 in the third Quarters of 1919, 1920 and 1921.

## NOTES ON MARRIAGES.—Second Quarter, 1922.

The number of *persons* married in the *second* Quarter of 1922 in England and Wales was 165,412, an increase of 64,264 over the number in the preceding Quarter, and of 22,830 over that in the corresponding Quarter of 1921. This number corresponds to an annual rate of 17·5 per 1,000 enumerated population.

## UNITED KINGDOM.—First Quarter, 1922.

In Great Britain and Ireland 260,954 births and 211,870 deaths were registered in the three months ended 31st March 1922. The natural increase in population was therefore 49,084. The number of persons married was 129,820.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

**METEOROLOGY.\*****JULY.**

In marked contrast to the conditions which prevailed during July of last year the weather was cool and unsettled throughout the month. There was considerable excess of precipitation and temperature was much below normal. No days were really hot. At hardly any of the seaside stations on the west and south coasts did the thermometer reach 70° F.

The rainfall over England and Wales was, on the average, about 50 per cent. above the normal. As much as twice the normal occurred over considerable areas in Hampshire, Lincolnshire and Norfolk, and 283 per cent. of the normal was reached at Norwich. The large total for the month can in part be attributed to the widespread heavy rainfall of the 5th, when over the whole of England and Wales, with the exception of coastal strips in the west and south-west, more than 25 mm. fell; in fact, on that day the amount reached 50 mm. over a considerable area in the south of England.

**AUGUST.**

The cool and unsettled conditions which had prevailed since the middle of June were maintained throughout the greater part of August. Temperature was much below the normal, and daily maxima above 70° F. were comparatively rare, and even in the south of England at the majority of stations the thermometer never exceeded 75° F.

Rainfall was excessive over most of England and Wales. The distribution of total rainfall, which was determined principally by the heavy rains of the 6th and 7th was irregular. The greatest amounts, exceeding 100 mm. and reaching 150 mm. in places, fell over a broad belt extending from Cornwall to Cumberland through the Midlands, many places in the latter district having more than twice the normal fall for the month. Sunshine was generally deficient, more particularly in southern England. The duration of sunshine at Kew Observatory amounted to about 70 per cent. of the average.

**SEPTEMBER.**

Throughout the greater part of September the weather was cool and unsettled, the only periods of comparatively settled conditions being from the 3rd to the 10th and for a few days about the 23rd. Temperature was everywhere deficient. Daily maxima exceeding 70° F. were rare; on the other hand no very low minima were reported, so that the mean temperature for the month was only slightly below the normal. In the centre and south of England, rainfall was below average. In northern and eastern England, on the other hand, the total fall for the month was in some cases from 50 to 100 per cent. above the normal. Amongst the heaviest falls in one day was 42 mm. at Holyhead on the 12th. Nearly everywhere there was a large deficiency of sunshine. In north-east England the deficiency amounted to 1·6 hours per day on the average the daily allowance being 3·0 hours as compared with the normal 4·6.

\* Excluding non-civilians.

† The populations are total populations and relate to 1922. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere.

Table VI.—155 SMALLER TOWNS } POPULATION, BIRTHS and DEATHS for  
(Estimated populations 20,000- } Quarter ended 30 September 1922.  
50,000 in 1921).

\* For statistics of other Colonial and Foreign Cities during the Second Quarter of 1922, see Quarterly Return for that period.  
† The death-rates in this column relate to all ages for Bombay, Madras, Christiania, and Budapest, and to children under 2 years of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 7 deaths from Plague in Sydney and suburbs, and 18 in Alexandria.

§ Including deaths from croup in Bombay, Paris, Antwerp, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Budapest, Rio de Janeiro, Montevideo and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

\*\* Including 75 deaths from Plague in Bombay, and 6 deaths from Asiatic Cholera in Bombay, and 4 in Madras.

\*\*\* The registration of births in Bombay is incomplete.

## EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review, and Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual Rates for the 13 weeks ended 30 December 1922.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31 December 1922.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 30 December 1922. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

*Note* :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, while that for the quarter ending 31st December contains also a summary of certain figures for the year. (*See* page IV).

## NOTES ON THE FOURTH QUARTER OF 1922. ENGLAND AND WALES.

### *Births.*

The Births registered in the *Fourth* Quarter of 1922 numbered 176,368 and were 19,328 fewer than in the preceding Quarter, and 22,760 fewer than in the corresponding Quarter of 1921. The Illegitimate Births totalled 7,101 or 1,443 fewer than in the fourth Quarter of 1921.

Of these 176,368 Births 90,281 were males and 86,087 females, giving a proportion of 1,049 males to 1,000 females; the average proportion in the 10 preceding fourth Quarters was also 1,049.

The Births registered in the Quarter correspond to an annual rate of 18·5 per 1,000 enumerated population. This is the lowest birth-rate recorded in any quarter except during the period of the war.

### *Deaths.*

The Deaths registered numbered 110,065 and were 19,083 more than in the preceding Quarter, but 11,726 fewer than in the corresponding Quarter of 1921. They included 55,927 males and 54,138 females, corresponding to an annual rate of 11·5 per 1,000 enumerated population and a proportion of 1,033 males to 1,000 females.

Influenza was stated to be either a primary or contributory cause of deaths in 1,243 cases, or 1·1 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 74 per 1,000, this being 23 per 1,000 below the average of the 10 preceding fourth Quarters.

### *Urban Mortality.*

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·10 in Chester and 0·11 in Blackpool; from *measles* 1·08 in Leeds, 1·28 in Nottingham, 1·81 in Preston and 2·02 in Burnley; from *scarlet fever* 0·21 in Bootle and in Bury, 0·22 in Reading and 0·32 in West Bromwich; from *whooping cough* 0·49 in Walsall and 0·67 in South Shields; from *diphtheria* 0·59 in West Bromwich; and from *influenza* 0·35 in Bury and in Rochdale, 0·37 in Wakefield, 0·38 in Portsmouth, and 0·64 in Barnsley.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 21·7 in Liverpool, 22·5 in St. Helens, 23·0 in Salford, 23·2 in Hull, and 27·3 in Aberdare.

### *Small Pox.*

Twenty-two fatal cases of small pox were registered during the quarter; sixteen belonged to Poplar; one to Fulham and one to Lambeth Metropolitan Boroughs, and two to Dartford, one to Bexley and one to Barry Urban Districts. The number of cases of the disease notified during the quarter was 295. Of these, 55 (including 49 in the Metropolitan Borough of Poplar) occurred in London, 24 in Middlesbrough County Borough, 51 in Doncaster, and 12 in Ilkeston Municipal Boroughs, 30 in Heanor, 16 in Eastwood and 10 in Bentley with Arksey Urban Districts, and 31 in Belper, 16 in Basford and 15 in Clowne Rural Districts. The distribution of the other cases is shown in footnotes to Table VIII.

## NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 66,303, as against 108,821, 92,845 and 77,337 in the fourth Quarters of 1919, 1920 and 1921.

## NOTES ON MARRIAGES.—Third Quarter, 1922.

The number of *persons* married in the *third* Quarter of 1922 in England and Wales was 179,400, an increase of 13,988 over the number in the preceding Quarter, and of 446 over that in the corresponding Quarter of 1921. The number corresponds to an annual rate of 18·8 per 1,000 enumerated population.

## UNITED KINGDOM.—Second Quarter, 1922.

In Great Britain and Ireland 254,050 births and 155,739 deaths were registered in the three months ended 30th June 1922. The natural increase in population was therefore 98,311. The number of persons married was 194,432.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

## SUMMARY, 1922.

The Summary relating to the year 1922, giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 23-37 of this publication, the Tables being numbered IX-XV.

## ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 780,187 births and 486,829 deaths were registered in England and Wales in the year 1922. The natural increase of population, by excess of births over deaths, was, therefore, 293,358, the average annual increase in the preceding five years having been 258,059. This statement excludes all war deaths except those registered in this country. The number of persons married during the year was 598,720.

The marriage-rate in England and Wales during the year 1922 was 15·8 per 1,000 of the population enumerated in 1921, the birth-rate 20·6 per 1,000, and the death-rate 12·9 per 1,000. Infant mortality was 77 per 1,000 registered births. The birth-rate was the lowest recorded except during the war years and infant mortality was lower than in any other year, the lowest rate hitherto recorded being 80 in 1920.

A statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and the groups of towns is given in Table X; and Table XI shows the birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 105 Great Towns.

## METEOROLOGY.\*

## OCTOBER.

Throughout the greater part of the British Isles October was abnormally dry. The mean temperature was low, especially in the southern districts. The deficiency was most marked during the latter part of the month.

---

\* Furnished by the Director of the Meteorological Office.

The total rainfall of the month was much below the normal. The driest region was in the centre of England and Wales where less than a quarter of the normal was recorded over a very large area. As little as 10 per cent. of the normal fell in the Cheshire plain; only 0.6 mm. being recorded at Wallasey from the 6th to the 30th. The only areas with rainfall above half the normal were the extreme north-east of England and the east of Kent.

Snow fell over a wide area on the 28th and 29th, even as far south as Falmouth.

Sunshine was much above the normal in all districts; records were remarkably good from the 11th to the 16th, on each of which days between 8 and 10 hours of bright sunshine were experienced in the south-east of England, with similarly high values in a few other parts of the country.

#### NOVEMBER.

The weather of November was for the most part quiet and cloudy and there was a widespread deficiency of rainfall. During the first ten days cyclonic conditions with generally unsettled weather prevailed. During the following two weeks a region of high pressure lay over the British Isles with fine weather and much inland fog, the latter being especially felt in the London area. At the end of the month the weather was variable. Throughout the greater part of England the mean temperature of the month was below the normal, the greatest deficiency being in the south-east district.

The dry spell which commenced in October continued in November, during which month the rainfall was abnormally low, being the smallest recorded in November since 1909. Over the greater part of the south of England the rainfall was between 50 and 70 per cent. of the normal. The north-east coast and a considerable area of the eastern centre of England had a rainfall of less than 25 mm. for the month. The distribution of sunshine was irregular, largely owing to the prevalence of fog. The most sunny district was England north-east.

#### DECEMBER.

The weather of the first half of the month was mild and quiet, the country being under the influence of an anticyclone. By the third week however pressure had fallen and depressions coming from the Atlantic dominated the weather. After the 18th a day seldom passed on which the wind did not attain gale force on some part of the coast. The month was mild; the mean temperature was everywhere in excess of normal, though appreciably below that of December 1921.

The rainfall was slightly greater than the normal, there being a general but not very large excess in all districts except England east. Some of the falls exceeded 40 mm., thus 41 mm. fell at Plymouth during the night of the 19th and 42 mm. at Petersfield during the 24 hours ending at 9 h. on the 22nd.

During the latter part of the month thunderstorms occurred locally and showers of snow or sleet fell in various places. The eastern part of England had a duration of sunshine in excess of the normal while the western part, including Wales, had a deficit. England south-east was the sunniest region and England north-west the least sunny.

**ENGLAND and WALES.**—AIR TEMPERATURE, RAINFALL, and  
SUNSHINE during the FOURTH QUARTER of the year 1922.

\* Excluding non-civilians.

† As extended on 1st October, 1922.

‡ The populations are total populations and relate to 1922. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin, Registration Area and Belfast are corrected by the inclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

§ The population refers to the borough as extended on 4th November, 1922. The births and deaths include those in the added area from that date.

¶ Deaths from small-pox are included as follows:—Greater London, 19; Outer Ring, 1; Remainder of Outer Ring, 1.

TABLE VI. — 155 SMALLER TOWNS } POPULATION, BIRTHS and DEATHS for

\* For statistics of other Colonial and Foreign Cities during the Third Quarter of 1922, see Quarterly Return for that period.

† The death-rates in this column relate to all ages for Bombay, Madras, Christiania, and Budapest, and to children under year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 14 deaths from Plague in Calcutta and 12 in Alexandria, and from Asiatic Cholera 67 in Calcutta.

§ Including deaths from croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Vienna, Prague, Budapest, Warsaw, Rio de Janeiro, Montevideo and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ Including 54 deaths from Plague in Bombay, and 1 in Madras, and from Asiatic Cholera 86 in Calcutta, 2 in Bombay, and 3 in Madras.

\*\* The registration of births in Bombay is incomplete.

\* Excluding non-civilians.

† The population refers to the borough as extended on 8th November, 1922. The births and deaths include those in the added area from that date.

‡ The populations are total populations and relate to 1922. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

§ Deaths from Small-pox are included as follows:—Greater London, 22; Outer Ring, 2; 16 Great Towns, 1; Remainder of Outer Ring, 1.

\* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1881-1915).

Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches). Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms. The factor used is 3. Winds above 43 miles per hour are reckoned as gales and winds between 21 and 43 miles per hour as moderate or strong winds. Direction is not tabulated when the speed of the wind is less than 5 miles per hour and winds less than that velocity are counted as m.

Table XIV—continued.

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Table XV.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES, 1922 (52 weeks).

Note.—The figures in this table are compiled from the weekly returns.

<sup>28</sup> These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

<sup>29</sup> The figures for London refer to the civilian population only.

<sup>30</sup> Including deaths from group in Bombay, Paris, Amsterdam, Copenhagen, the German cities, Vienna, Prague and suburbs, Warsaw, and New Orleans.

<sup>31</sup> Including 144 deaths from plague in Calcutta, 590 in Bombay, and 1 in Madras, and from Asiatic Cholera 1,264 deaths in Calcutta, 14 in Bombay, and 16 in Madras.

<sup>32</sup> The registration of births in Bombay is incomplete.
